Projects

Durdans Hospital LIMS | Full-Stack Developer, Group Project Aug 2025 - Aug 2026

- **Tech:** Next.js, TypeScript, Spring Boot, PostgreSQL, Keycloak
- A microservices-based Laboratory Information Management System (LIMS) designed to manage end-to-end laboratory workflows.
- Developed the Orders & Billing module end-to-end, implementing order creation, multi-test selection, priority management, billing, and payment processing.
- Implemented sample collection, rejection/recollection, barcode generation, and collection history, with RESTful API integration and PostgreSQL database operations.

BlogNest | Full-Stack Developer, Personal Project Dec 2025

- **Tech:** PHP, MySQL, HTML, CSS, JavaScript
- A web-based blogging platform designed to allow users to securely create, explore, edit, and manage blog content.
- Developed user authentication and full CRUD functionality for blog creation, exploration, editing, and deletion using PHP and MySQL.
- Implemented CSRF protection, input sanitization, session management, flash messaging, and live blog search to improve application security and user experience.

ExpenseIQ | Full-Stack Developer, Personal Project

Aug 2026 - Sep 2026

- **Tech:** Next.js, TypeScript, PostgreSQL, Prisma, NextAuth.js, Recharts
- A full-stack expense tracking application enabling users to log, categorize, and analyze personal spending with budget management.
- Developed Next.js API routes for expense CRUD operations and implemented authentication using NextAuth.js, with Prisma ORM for type-safe PostgreSQL database access.
- Built an interactive analytics dashboard using Recharts to visualize spending by category and over time, and implemented category-wise budget limits with real-time visual alerts.

Battery Vitals | Embedded Systems Developer, Group Project

Aug 2024 - Aug 2025

- **Tech:** Python, ESP32, ADS1115, Embedded Systems
- A microcontroller-based battery monitoring system designed to evaluate the performance of Li-ion, Li-Po, and lead-acid batteries through controlled charging and discharging cycles.
- Implemented battery charging and discharging control logic and integrated voltage sensors with the ESP32 and ADS1115 ADC to monitor battery voltage from 0–25V.
- Implemented data acquisition and transmission to a web platform for real-time voltage-time visualization and integrated a 16×4 LCD to display voltage, current, and State of Health (SoH).
